

Do you have high grade serous ovarian cancer?

We are looking for women with HGSOC (high grade serous ovarian cancer) to take part in a research study called BioDiva.

The purpose of the BioDiva study is to learn more about HGSOC cancer to:

- Detect HGSOC (high grade serous ovarian cancer) sooner
- Find better treatments

The study will gather information about biomarkers in your cancer. Biomarkers are things that can be measured in blood, other fluids and tissues. Biomarkers are used to:

- Detect cancer
- Tell doctors if a treatment for cancer is working

Taking part in the study involves letting the study team collect:

- Tumour tissue samples
- Blood samples
- Other samples

Version Date: 08/2020
